

GEOSENTRI USER EVALUATION QUESTIONNAIRE

Web Monitoring Portal — Supervisor

GeoSentri: An IoT-Based Real-Time GPS Monitoring System for Police Personnel

Respondent Code/Name (Optional):	Date:
Respondent Role: Supervisor/Administrator	Experience Using GeoSentri:

Evaluation Objective

Evaluate the GeoSentri web monitoring portal in terms of Functional Suitability, Usability, Reliability, Performance Efficiency, and Security based on ISO/IEC 25010:2011.

Instructions

This questionnaire is intended only for Supervisor/Administrator. After using GeoSentri, check one box that best represents your level of agreement with each statement. Answer all items based on your actual experience. Each of the five quality criteria contains eight statements, for a total of 40 statements.

5	4	3	2	1
Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree

A. FUNCTIONAL SUITABILITY

Coverage: Functional Completeness (FCO), Functional Correctness (FCR), and Functional Appropriateness (FAP)

NO.	STATEMENTS	LEVEL OF AGREEMENT				
		5	4	3	2	1
1	The web portal provides the map and location-monitoring functions needed to supervise police personnel. (FCO)	☐	☐	☐	☐	☐
2	The web portal provides the functions needed to manage personnel accounts, deployments, tasks, and backup requests. (FCO)	☐	☐	☐	☐	☐
3	The web portal provides report validation, correction, notification, report-generation, and analytics functions. (FCO)	☐	☐	☐	☐	☐
4	Personnel identity, duty status, deployment, and latest received GPS information are displayed correctly. (FCR)	☐	☐	☐	☐	☐
5	Deployment, task, backup-request, and report details are recorded and displayed correctly. (FCR)	☐	☐	☐	☐	☐
6	Report validation, correction reason, reviewer, and history information are recorded correctly. (FCR)	☐	☐	☐	☐	☐
7	Map, search, and filtering functions help me locate personnel and monitor operations effectively. (FAP)	☐	☐	☐	☐	☐
8	Personnel management, deployment, reporting, and analytics functions support supervision and decision-making. (FAP)	☐	☐	☐	☐	☐

B. USABILITY

Coverage: Learnability (L), Operability (O), User Error Protection (UEP), and User Interface Aesthetics (UIA)

NO.	STATEMENTS	LEVEL OF AGREEMENT				
		5	4	3	2	1

NO.	STATEMENTS	LEVEL OF AGREEMENT				
		5	4	3	2	1
1	The sign-in and verification-code process is easy to learn. (L)	☐	☐	☐	☐	☐
2	The purpose of the dashboard, map, navigation menu, tables, forms, and icons is easy to understand. (L)	☐	☐	☐	☐	☐
3	I can move between monitoring and management functions without difficulty. (O)	☐	☐	☐	☐	☐
4	Search, filter, map, table, form, and report controls are easy to operate. (O)	☐	☐	☐	☐	☐
5	Validation messages clearly explain missing or incorrect information. (UEP)	☐	☐	☐	☐	☐
6	Confirmations, restrictions, and retry options help prevent accidental, invalid, or duplicate actions. (UEP)	☐	☐	☐	☐	☐
7	Text, tables, charts, labels, buttons, and status information are easy to read. (UIA)	☐	☐	☐	☐	☐
8	Colors, icons, spacing, and page layouts provide a consistent and professional appearance. (UIA)	☐	☐	☐	☐	☐

C. RELIABILITY

Coverage: Availability (AV), Fault Tolerance (FT), and Recoverability (RC)

NO.	STATEMENTS	LEVEL OF AGREEMENT				
		5	4	3	2	1
1	The web portal is accessible and ready when required for normal supervision. (AV)	☐	☐	☐	☐	☐
2	The dashboard, map, personnel, deployment, task, report, and analytics pages are available when needed. (AV)	☐	☐	☐	☐	☐
3	Live location updates, notifications, search, and management functions work consistently during normal use. (AV)	☐	☐	☐	☐	☐
4	The portal provides clear and safe behavior when the internet connection is temporarily interrupted. (FT)	☐	☐	☐	☐	☐
5	Delayed, stale, or temporarily unavailable GPS readings are clearly identified without making the portal unusable. (FT)	☐	☐	☐	☐	☐

NO.	STATEMENTS	LEVEL OF AGREEMENT				
		5	4	3	2	1
6	Failed requests provide an appropriate retry option without creating unnecessary duplicate records. (FT)	☐	☐	☐	☐	☐
7	The portal returns to normal operation after internet connectivity is restored. (RC)	☐	☐	☐	☐	☐
8	Previously confirmed operational information reloads correctly after refreshing or reopening the portal. (RC)	☐	☐	☐	☐	☐

D. PERFORMANCE EFFICIENCY

Coverage: Time Behavior (TB), Resource Utilization (RU), and Capacity (C)

NO.	STATEMENTS	LEVEL OF AGREEMENT				
		5	4	3	2	1
1	Web pages and dashboard information load within an acceptable amount of time. (TB)	☐	☐	☐	☐	☐
2	Search, filtering, assignment, saving, validation, and report-generation actions respond promptly. (TB)	☐	☐	☐	☐	☐
3	New GPS readings, map-marker changes, and notifications appear soon after the data are received. (TB)	☐	☐	☐	☐	☐
4	The portal operates smoothly in the intended web browser during normal use. (RU)	☐	☐	☐	☐	☐
5	Map movement, marker clustering, tables, charts, and page navigation operate without excessive lag. (RU)	☐	☐	☐	☐	☐
6	The portal performs ordinary operations without unnecessary repeated loading or excessive resource use. (RU)	☐	☐	☐	☐	☐
7	The map remains responsive while displaying the normal number of personnel markers and operational areas. (C)	☐	☐	☐	☐	☐
8	The portal remains responsive while displaying multiple personnel, deployments, tasks, reports, and notifications. (C)	☐	☐	☐	☐	☐

E. SECURITY

Coverage: Confidentiality (CF), Integrity (IN), Accountability (AC), and Authenticity (AU)

NO.	STATEMENTS	LEVEL OF AGREEMENT				
		5	4	3	2	1

NO.	STATEMENTS	LEVEL OF AGREEMENT				
		5	4	3	2	1
1	The portal limits personnel locations, reports, evidence, and operational information to authorized accounts. (CF)	☐	☐	☐	☐	☐
2	Users can access only the functions permitted for their assigned supervisor role. (CF)	☐	☐	☐	☐	☐
3	The portal prevents invalid or unauthorized changes to personnel, deployment, task, and report records. (IN)	☐	☐	☐	☐	☐
4	Validated reports, correction reasons, and revision history remain complete and accurate after updates. (IN)	☐	☐	☐	☐	☐
5	Account, deployment, task, and report actions are associated with the responsible authenticated account. (AC)	☐	☐	☐	☐	☐
6	Report reviews and other important actions retain the responsible user, action, status, and time. (AC)	☐	☐	☐	☐	☐
7	The Login ID, password, and verification-code process helps confirm the identity of the authorized user. (AU)	☐	☐	☐	☐	☐
8	Session and logout controls keep access associated with the correct account and end access when required. (AU)	☐	☐	☐	☐	☐
